Riley del Fierro, MSIM

Applied AI Engineer · AI Agent & MCP Development · Serverless Cloud Automation
rdfierro@gmail.com · Seattle, WA · github.com/rdfierro

SUMMARY OF QUALIFICATIONS

Applied AI engineer who builds AI agents and serverless automation into enterprise operations, owning the work from architecture and build through security review and operator adoption. At Unify Consulting, designed an MCP-based conversational agent as the sole front-end for an AWS funding-automation platform, cutting manual approval effort 84%, and built 10 AI skills that give a non-technical FP&A team back 8–10 hours a week. A decade of pricing and BI work at Starbucks, Nestlé, and Good Food Holdings, plus founding Pricesmith, means every agent starts from the business metric it has to move.

KEY COMPETENCIES

AI Agent & MCP Development • Agentic Workflow Design & Guardrails • Amazon Bedrock AgentCore
Serverless AWS Architecture • Systems Integration (API/GraphQL) • AI Security, Auth & Observability
Data Architecture & Pipelines • Stakeholder Enablement & Adoption • Pricing & Commercial Analytics

PROFESSIONAL EXPERIENCE

Unify Consulting — Kirkland, WA **May 2024 – Present**
Senior Consultant – AI Agent Engineering & Cloud Automation

Lead technical delivery of AI agent and cloud automation systems for AWS and Amazon engagements, owning each project end-to-end from architecture and build through security review and operator rollout.

AWS Post-Signature Funding Automation (AWS Migration Program) — Lead Automation Developer / Technical Architect:

- Designed a conversational AI agent as the sole operator front-end for a serverless funding-automation platform, replacing a web UI with zero custom front-end code and cutting manual approval-ticket effort 84% (45 → 7 min/ticket); MVP built, production launch in progress.
- Built and deployed a custom MCP (Model Context Protocol) server on Amazon Bedrock AgentCore exposing 8 tools (contract ingestion, deal lookup, ticket drafting, pipeline status, ad-hoc queries), fronted by a gateway with OIDC/JWT authentication.
- Set a “Lambda-first, agents only where judgment is needed” architecture: deterministic steps run in Lambda/Step Functions while the agent operates behind confirmation gates, read-only SQL enforcement, and draft-only, human-reviewed financial tickets.
- Architected the serverless data hub (Lambda, Step Functions, Redshift Serverless, EventBridge): a 15-table schema mapping 242 fields across 5 source systems into a single approval-ready view.
- Removed 3 services (Textract, SES, Bedrock) and a manual spreadsheet dependency from MVP by switching to structured upstream data, reducing system complexity and security review scope.
- Led the AWS application security review for the agentic system: threat model, OIDC/JWT inbound auth, identity-level audit logging, 3 IaC-deployed CloudWatch alarms, an incident-response runbook, and privacy review.
- Coordinated integrations across 7+ AWS teams on a 3-person team and secured approvals-API access one week ahead of its 2-week SLA.

AI-Powered Finance Automation & Team Enablement (Amazon Global Real Estate FP&A):

- Designed and deployed a library of 10 generative AI skills (variance analysis, close packages, executive briefings, headcount/CapEx tracking) that team members invoke in natural language.
- Wrote onboarding documentation that got 8 non-technical FP&A analysts using AI-assisted workflows without technical training, cutting manual reporting time 8–10 hours/week across 8+ recurring reports.

Cloud Infrastructure & Budgeting Automation (Amazon Global Real Estate):

- Built an AWS Lambda/SageMaker pipeline transforming budgeting data for global vendor-manager tools, with CI/CD and QuickSight reporting, saving the team ~4 hours/day in aggregate.

Pricesmith Inc. — Seattle, WA **May 2022 – Present**
Founder/CRO (Former); Advisor (Current)

- Co-founded a pricing-strategy SaaS company and led business development; ran pricing strategy for a $1B-revenue client, growing its pricing-program revenue 3x YoY.

- Architected the client's enterprise data warehouse and BI reporting from the ground up to feed Pricesmith's pricing software.

Good Food Holdings LLC — Bellevue, WA **Nov 2021 – Apr 2022**
Senior Manager, Strategic Pricing

- Led a pricing team and consolidated four independent banners' data into one AWS enterprise data warehouse on a standardized spec; built Power BI/DAX KPI reporting to drive pricing-strategy adoption.

Starbucks Coffee Company → Nestlé Coffee Partners (Acquisition) — Seattle, WA **Mar 2016 – Nov 2021**
Senior Analyst, Data & Reporting → Strategic Pricing

- Built BI reporting and data pipelines combining syndicated (IRI/Nielsen), SAP ERP, and consumption data for ~3,000 dashboard users and consumers across North America.
- Created custom reporting that saved 6–7 hours per individual analysis; led data readiness and the Tableau → Power BI migration for Nestlé's acquisition of Starbucks' CPG channel.

Lynden Inc. (Alaska Marine Lines, Lynden International) — Seattle, WA **Jan 2012 – Feb 2016**
Pricing Systems Analyst; Credit Specialist, Canadian Pharmaceutical Distribution Network

EDUCATION

University of Washington Information School — Seattle, WA
Master of Science, Information Management · GPA 3.98 · Faculty Award for Excellence in Information Management

University of Washington — Seattle, WA
Bachelor of Arts, Economics · Certificate in International Economics

TOOLS AND TECHNOLOGY

AI & Agent Development: MCP (Model Context Protocol), FastMCP, Amazon Bedrock AgentCore (Runtime, Gateway), Amazon Quick Suite agents, AI agent design & guardrails, JSON-RPC, generative AI skill design, agentic coding tools (Kiro)

Cloud & AWS: Lambda, Step Functions, Redshift Serverless, S3, EventBridge, SNS, SQS, AppSync, IAM/STS, CloudWatch, CloudFormation, QuickSight, SageMaker; Google Cloud Platform, Microsoft Azure; Docker

Integration, Auth & APIs: GraphQL, REST, OIDC/JWT, SigV4, cross-account IAM, Microsoft Graph API, Oracle ERP (+ NetSuite), SAP ERP

Data & Analytics: Databricks, Tableau, Power BI, RStudio, Alteryx Designer, SSMS

Delivery Tooling: VS Code, Git/GitLab, JIRA, Asana, Smartsheet, Trello

Languages: Python, SQL, GraphQL, JavaScript/TypeScript, HTML/CSS, R, Bash, DAX
